Carbonic anhydrase I (EC 4.2.1.1) (Carbonate dehydratase I) (CA-I)
                                                                                                                                                                                                                                               "Characterisation of opossum (Monodelphis domestica) carbonic anhydrase I and alpha globin coding sequences.";
Submitted (OCT-2001) to the EMBL/GenBank/DBJ databases.
-!- FUNCTION: Reversible hydration of carbon dioxide.
-!- CATALYTIC ACTIVITY: H(2)CO(3) = CO(2) + H(2)O.
-!- COPACTOR: Zhnc (By similarity).
-!- COBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the eukaryotic-type carbonic anhydrase

(CAI) to Arg (CGI), in the active site of human carbonic anhydrase
                                                                                                                                                                                                                                                                         Hum., Mutat. 4:294-296(1994).
-!- FUNCTION: Reversible hydration of carbon dioxide.
-!- CATALYTIC ACTIVITY: H(2)CO(3) = CO(2) + H(2)O.
-!- COPACTOR: Zinc.
-!- COPACTOR: Zinc.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the eukaryotic-type carbonic anhydrase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5)

J. Biol. Chem. 255:9196-9204(1980).

-! FUNCTION: Reversible hydration of carbon dioxide.

-! CATALYTIC ACTIVITY: H(2)CO(3) = CO(2) + H(2)O.

-! COPACTOR: Zinc.

-! SUBCELLULAR LOCATION: Cytoplasmic.

-! POLYMORPHISM: The sequence shown is that of the electrophoretically homogeneous D isozyme.

-! SIMILARITY: Belongs to the eukaryotic-type carbonic anhydrase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Craniata, Vertebrata; Buteleostomi;

Biophys. Acta 576:290-304(1979).

-i-FUNCTION: Reversible hydration of carbon dioxide.
-i-CATALYTIC ACTIVITY: H(2)CO(3) = CO(2) + H(2)O.
-i-COPACTOR: Zinc.
-i-SUBCELLULAR LOCATION: Cytoplasmic.
-i-MISCELLANGOUS: ONE MINOR AND THREE MAJOR FORMS WERE ISOLATED CHROMATOGRAPHICALLY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            35 K -> T (IN ONE OF THE MAJOR FORMS)

Carbonic anhydrase I (EG 4.2.1.1) (Carbonate dehydratase I) (CA-I)
                                                                               from the zebrafish (Danio rerio).";
J. Mol. Evol. 44:432-439(1997).
-!- FUNCTION: Reversible hydration of carbon dioxide.
-!- CATALYTIC ACTIVITY: H(20(3) = CO(2) + H(2)O.
-!- COFACTOR: Zinc (By similarity).
-!- COFACTOR: Zinc (By similarity).
-!- SIMILARITY: Belongs to the eukaryotic-type carbonic anhydrase

                                                                          -!- FUNCTION: Reversible hydration of carbon dioxide.
-!- CATALYTIC ACTIVITY: H(2)CO(3) = CO(2) + H(2)O.
-!- COFACTOR: Zinc.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- POLYMORPHISM: Four electrophoretic alleles are know to exist, they are designated A (shown here), B, C and D.
-!- SIMILARITY: Belongs to the eukaryotic-type carbonic anhydrase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SFNVDFDDTENKSVLRGGPLTGSYRLRQVHLHWGSADDHGSEHIVDGVSYAAELHVVHWN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5, Application US/08448164

Patent No. 592536

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: SCHLESSINGER, JOSEPH
TITLE OF INVENTION: A NOVEL RECEPTOR-TYPE PHOSPHOTYROSINE
TITLE OF INVENTION: PHOSPHATASE-BETA
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: PENNIE & EDMONDS
STRREET: 1155 Avenue of the Americas
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
   COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/015,973
FILLING DATE: 10-FEB-1993
CLASSIFICATION: 435
